SKILLS:

- **Mobile Apps Development:** Kotlin/Java, MVVM, SQLite, Dagger2, Retrofit, Firebase FCM, real time, firestore, Google Maps Api, Coroutines, Flow, Architecture components, Jetpack.
- **Frontend:** React.js, React-native, Redux, Axios, Gatsby, CSS3/Sass, Typescript.
- **Backend:** Nodejs/Express, Socket.io, MariaDB, MySQL, MongoDB, Mongoose, DynamoDB, Sequelize, Knext.js/Objection, Jest.
- **DevOps:** AWS EC2/S3/RDS, Heroku, Netlify, PM2, NginX, Apache, Firebase Cloud Functions.
- **Tools:** Git/Github, bitbucket pipelines, Asana, Trello, Postman, and Lighthouse.

EXPERIENCE:

- **Native Android App | BizNearby | Freelance work:**   JANUARY 2021 – FEBRUARY 2021
  Develop Android app that uses the Google Maps and location APIs as to allow the user to search for nearby businesses registered in the app. It has exclusive sections for administrators, moderators and regular users. In addition, was in charge of the technical lead of the development of the entire Project including the RESTful API built using Nodejs + Express.

- **Native Android App | ApplbartiFace | Freelance work:**   JULY 2020 – SEPTEMBER 2020
  Develop Android App that dynamically fetches and displays data from a rest API. Also, it allows to realize all CRUD operations over the different sorts of information and has offline-mode functionality built-in.
  Repo: https://github.com/IBARTI2019/ApplbartiFace

- **Web App | LaSocialNetwork | Side project:**   DECEMBER 2019 – ONGOING
  Single Page Application development that has the basic social network functionalities such as: posts, comments, likes, dislikes, user profiles, relationships, instant messaging, etc. One of my biggest projects given that I built from scratch both the frontend and backend and also a mobile app built with react-native.
  Repo: https://github.com/Sneyder2328/LaSocialNetwork. View live at: https://sneyder-lsn.netlify.app/

- **Native Android App | CryptoTracker | Side project:**   SEPTEMBER 2018 – DECEMBER 2018
  Android App and web server with scrapper that fetches cryptocurrency details every 10 minutes and updates the information from the app itself, furthermore it allows to set price alerts and cryptocurrencies portfolio management.
  Repo: https://github.com/Sneyder2328/CryptoTracker

- **Other Android, Web and Desktop Apps | Several side projects:**   2014 – ONGOING
  Ever since I learnt how to program back in 2014 I have been developing side projects either for fun, for personal use or just for learning's sake, from which some are available as open source code in my GitHub profile and some others are available on my Google Play Store section.
