BACKEND / FULL-STACK ENGINEER

SUMMARY

Backend / Full Stack Engineer with experience delivering web products and APIs end-to-end. Strong in the TypeScript / JavaScript ecosystem, Node.js backends, modern React frontends, and production systems using PostgreSQL, Redis, queues, and multi-environment deployments. Proven technical leadership, product focused work, and pragmatic architecture decisions in remote teams. Committed to software craftsmanship and collaborative growth, driven by a genuine love for solving complex engineering problems.

CORE SKILLS

- Backend: TypeScript, Node.js, NestJS, Express, REST APIs, tRPC, Authentication/Authorization
- Data: PostgreSQL, MySQL, DynamoDB, MongoDB, Redis, SQL, Prisma, Sequelize
- Distributed Systems: Microservices, RabbitMQ, WebSockets, Caching, Background jobs
- Cloud & DevOps: AWS (EC2, RDS, DynamoDB), Docker, Kubernetes, Nginx, CI/CD, Linux/VPS, Git
- Monorepos & DX: Turborepo, shared packages, developer tooling
- AI-assisted Development: Cursor, Claude Code, Clawd.bot (refactors, scaffolding, test generation, code review support).
- Collaboration & Leadership: System design, code reviews, mentorship, agile, stakeholder alignment

PROFESSIONAL EXPERIENCE

FULL STACK ENGINEER | GOAT Finance | Remote | Mar 2025 – Present

Stack: TypeScript, NestJS, PostgreSQL, Sequelize, Redis, RabbitMQ

- Designed and maintained backend services and REST APIs supporting crypto trading operations in a microservices environment.
- Integrated institutional MPC (Multi-Party Computation) wallet provider for secure signing and asset operations; implemented audit-friendly flows and operational safeguards.
- Delivered Banking-as-a-Service (BaaS) integrations to provision customer fiat accounts and support cross-border transaction workflows, including error handling and reconciliation-friendly behavior.
- Implemented audit logging for transaction flows to improve observability and support compliance/audit requirements (structured events with traceable transaction context).
- Built monitoring for third-party integrations and automated alerting to a Microsoft Teams channel to speed up incident detection and response.

CAREER BREAK | Remote | Jan 2023 – Feb 2025

- Medical leave and recovery; returned to full-time work in 2025.

- Continued hands-on practice through personal projects and skill refresh (TypeScript/Node.js, monorepos, PostgreSQL) and adoption of AI-assisted development workflows.

FRONTEND DEVELOPER | Mercury Cash | Remote | Apr 2021 – November 2022

Stack: React, Redux-Saga, REST/GraphQL integrations

- Led the migration of a finance web app from Vue.js to React, defining migration strategy, architectural standards, and component patterns.
- Led a team of 3 developers during React adoption; mentored engineers via pairing, reviews, and internal guidance on hooks, state management, and maintainable UI patterns.
- Built a custom Redux + redux-saga state layer to orchestrate complex multi-step flows (modals, transactions, and asynchronous UI states).
- Integrated UI components with REST and GraphQL APIs, coordinating contracts and edge cases with backend stakeholders.
- Developed shared utilities used across multiple micro-frontends to standardize workflows and reduce duplicated effort.
- Maintained legacy React Native mobile applications, shipping updates and fixes as needed.

SOFTWARE ENGINEER (FREELANCE & CONTRACT) | Remote | 2014 – 2021

- Delivered 20+ web and mobile applications end-to-end, including requirements gathering, implementation, deployment, and maintenance.
- Built and published native Android apps (Java/Kotlin) to Google Play, handling OS version changes and backward compatibility.
- Architected a full-stack social platform (React, Node.js, React Native) including real-time chat using WebSockets.
- Implemented serverless functions on Google Cloud Functions for lightweight backend tasks and integrations.

LATEST PERSONAL PROJECTS | 2025 – Present

Hello Cosmos! (EdTech Platform) — Turborepo, React, NestJS, Prisma ORM.

- Built a monorepo-based full-stack learning platform featuring SM-2 spaced repetition scheduling and parental controls.

El Cambio (Currency Exchange Tracker) — Turborepo, NestJS, React, PostgreSQL, tRPC

- Built an exchange-rate tracking app for Venezuelan rates (BCV) with persisted history and a modern web stack.

Additional small builds — Portfolio, blog, AI chatbot, landing pages

- Shipped multiple small products focused on rapid iteration, UI polish, and pragmatic engineering.

EDUCATION

Informatics Engineering (Coursework) | Universidad Centroccidental Lisandro Alvarado | 2018 – 2021

- Completed 3 years of coursework toward the degree.

LANGUAGES

- Spanish: Native
- English: Fluent
